

PRO TIPS TO RECORD BETTER VIDEO AT HOME

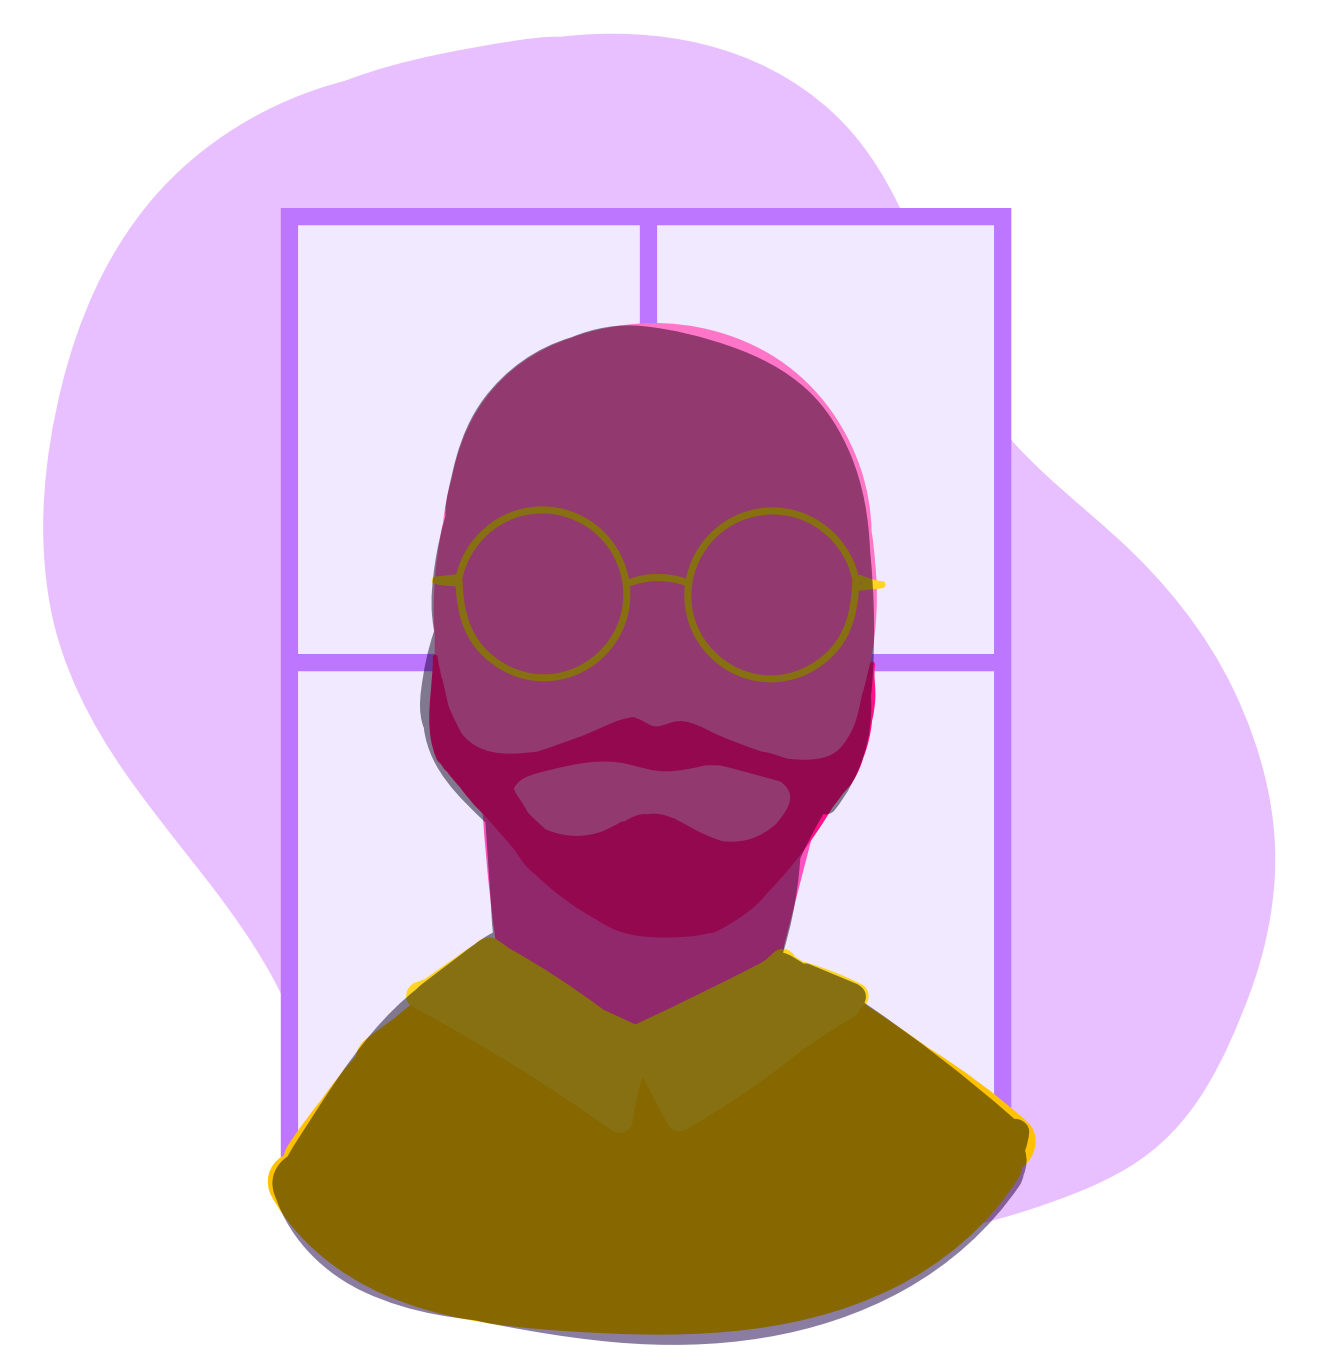

Charge up your devices

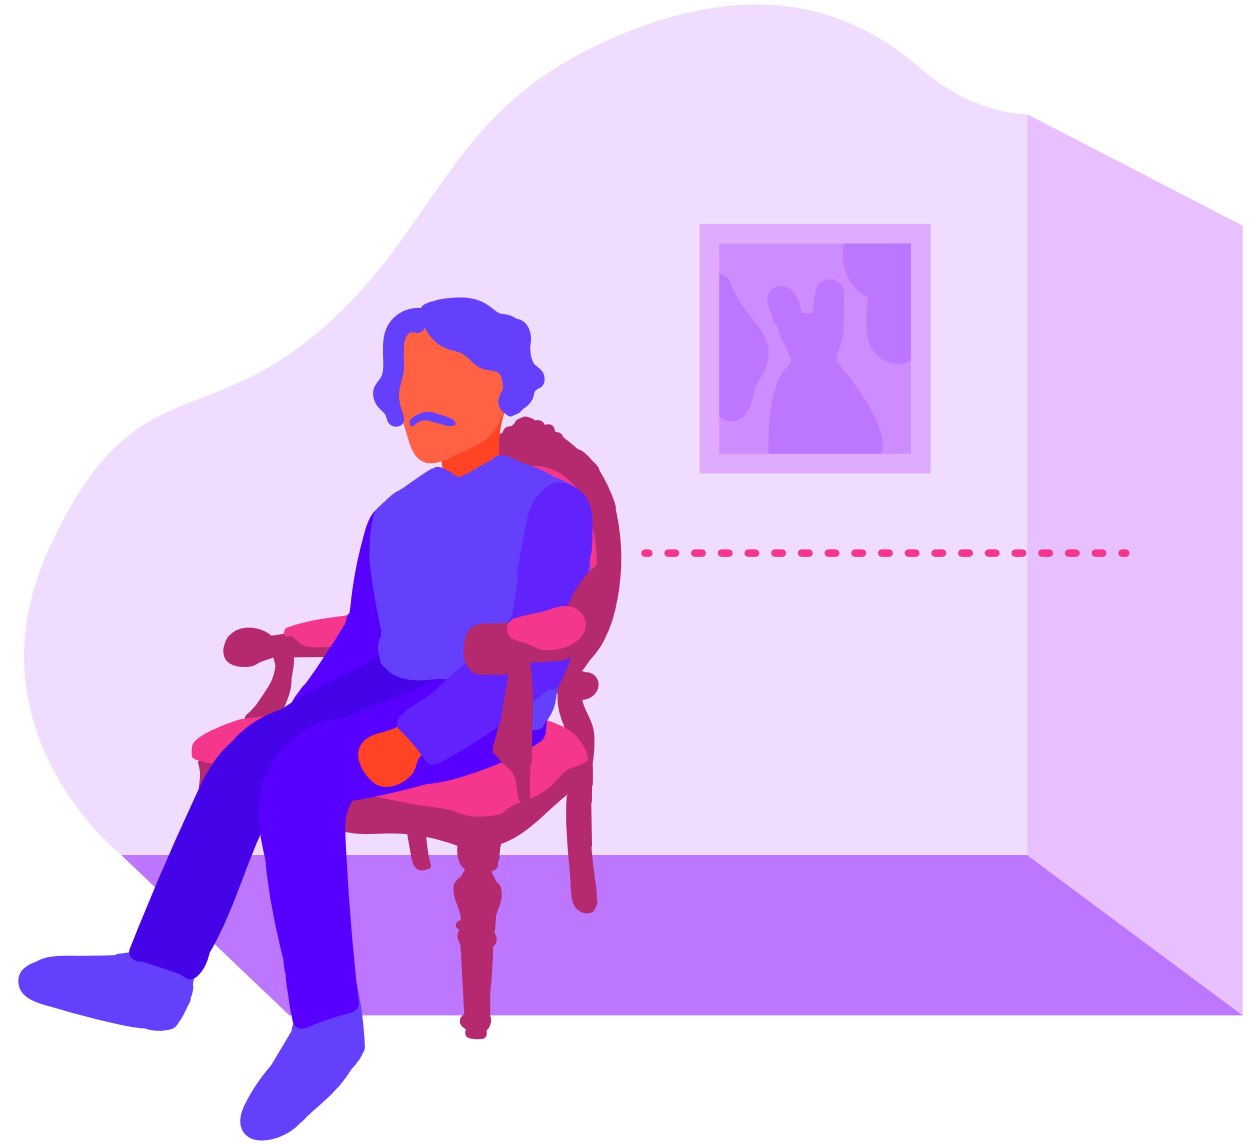

Find a quiet, enclosed area

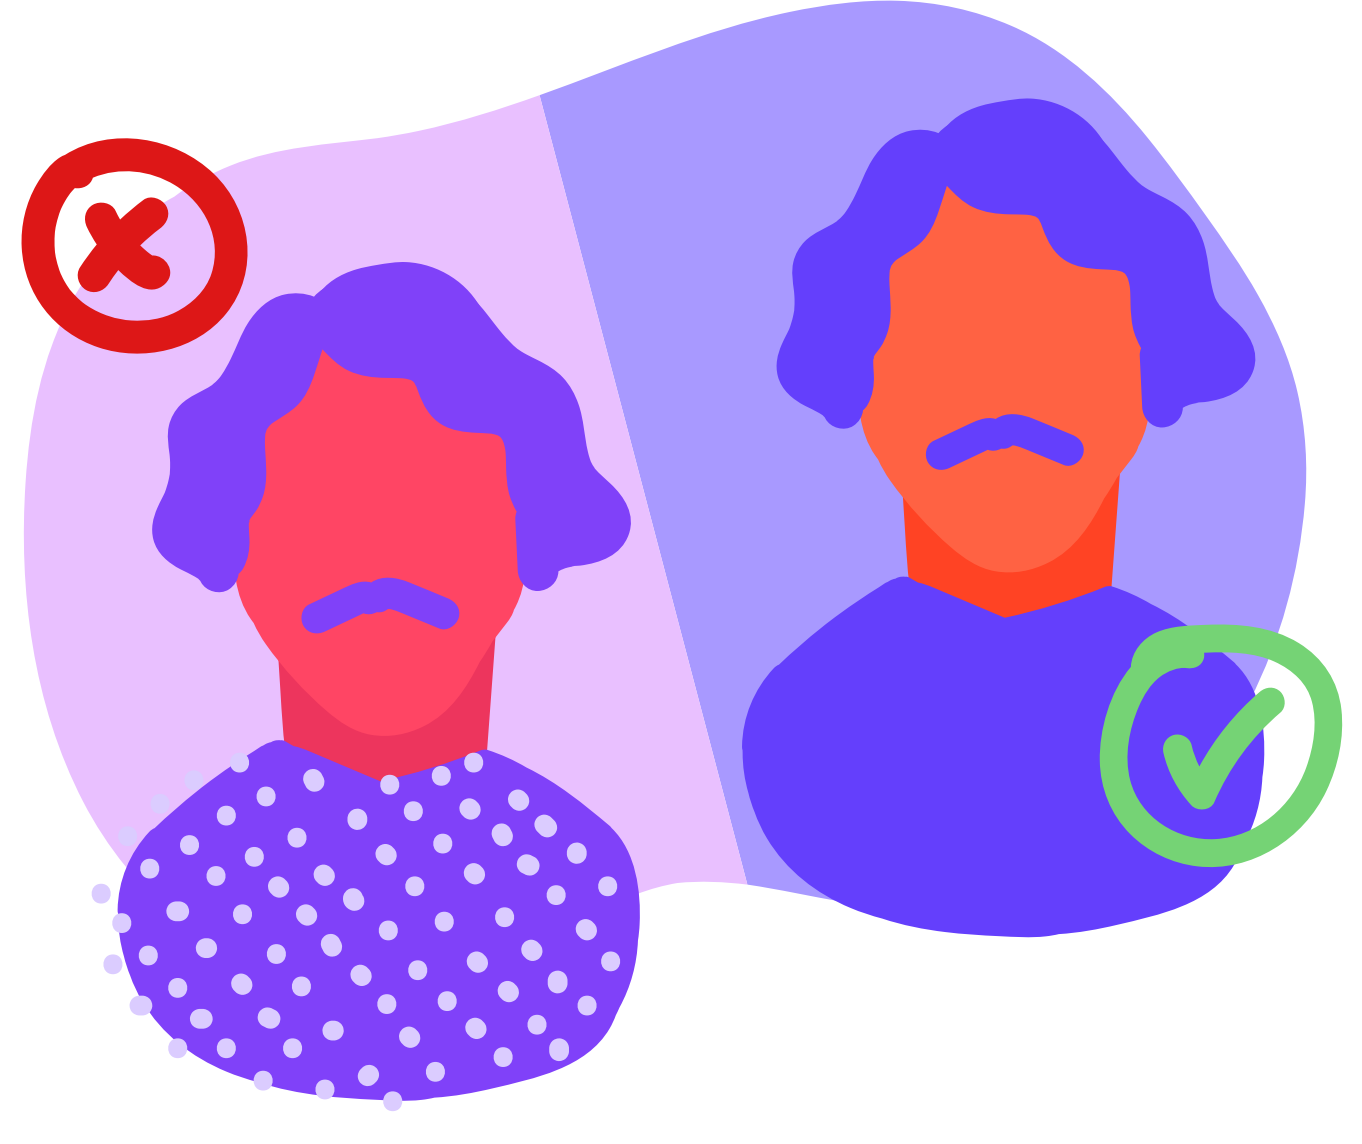

Face a window for nice, even lighting

Avoid windows or bright lights behind you

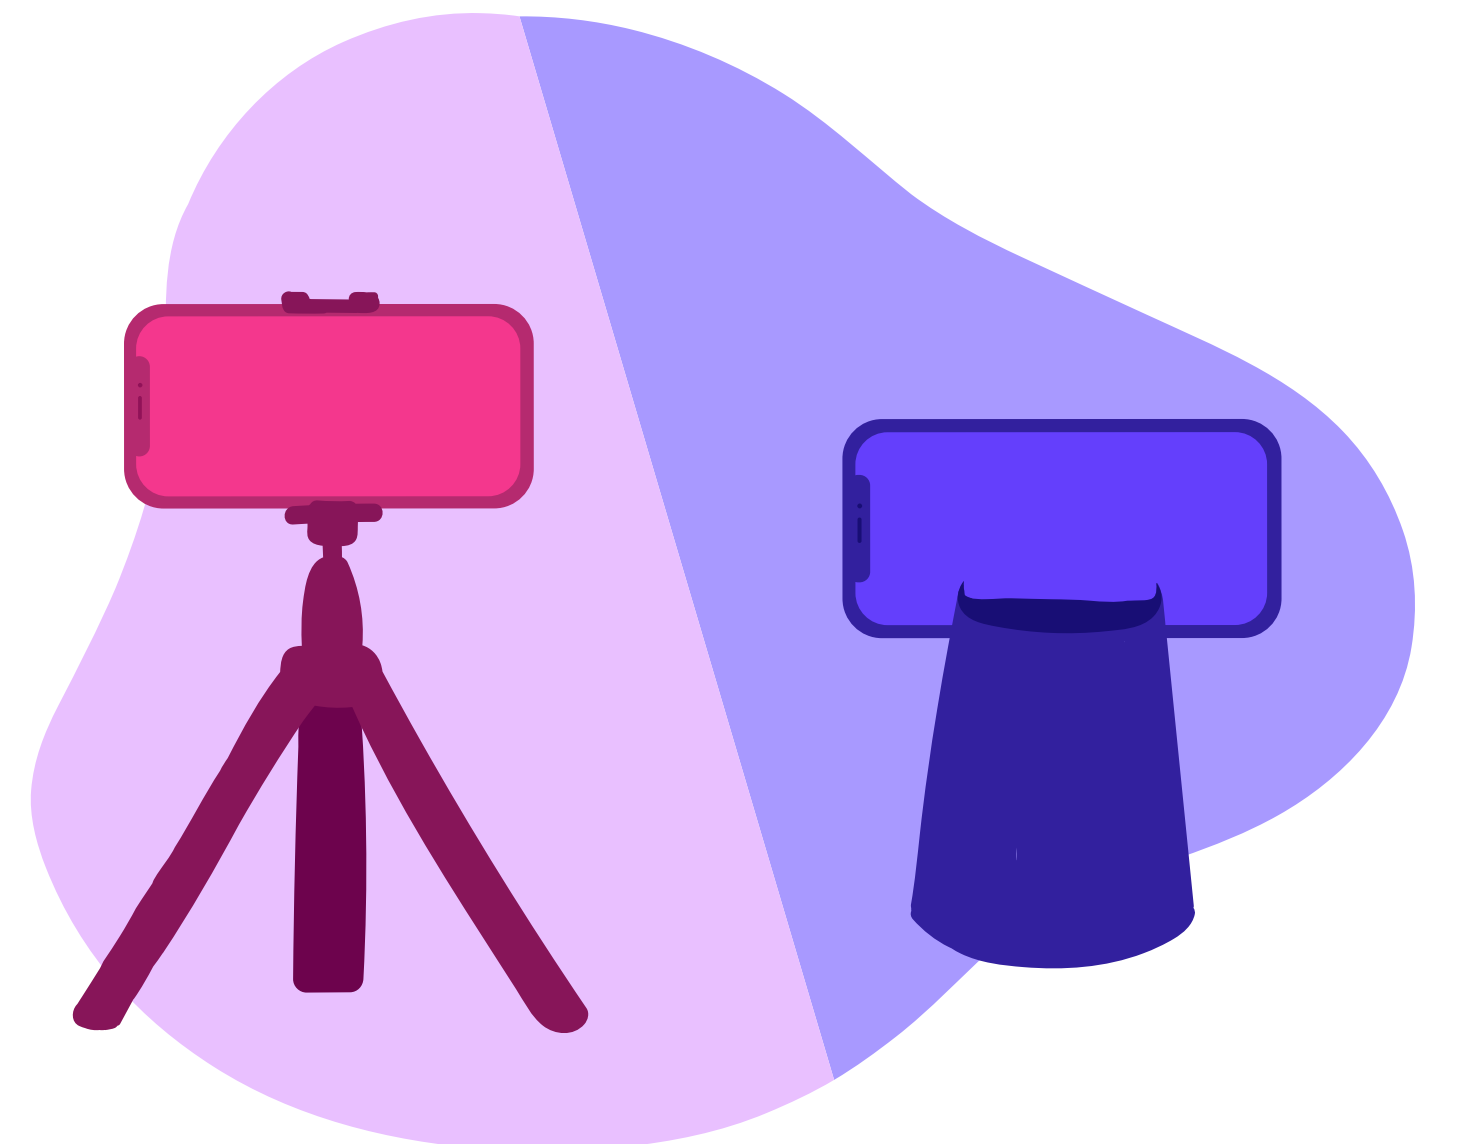

Move away from the wall to create depth

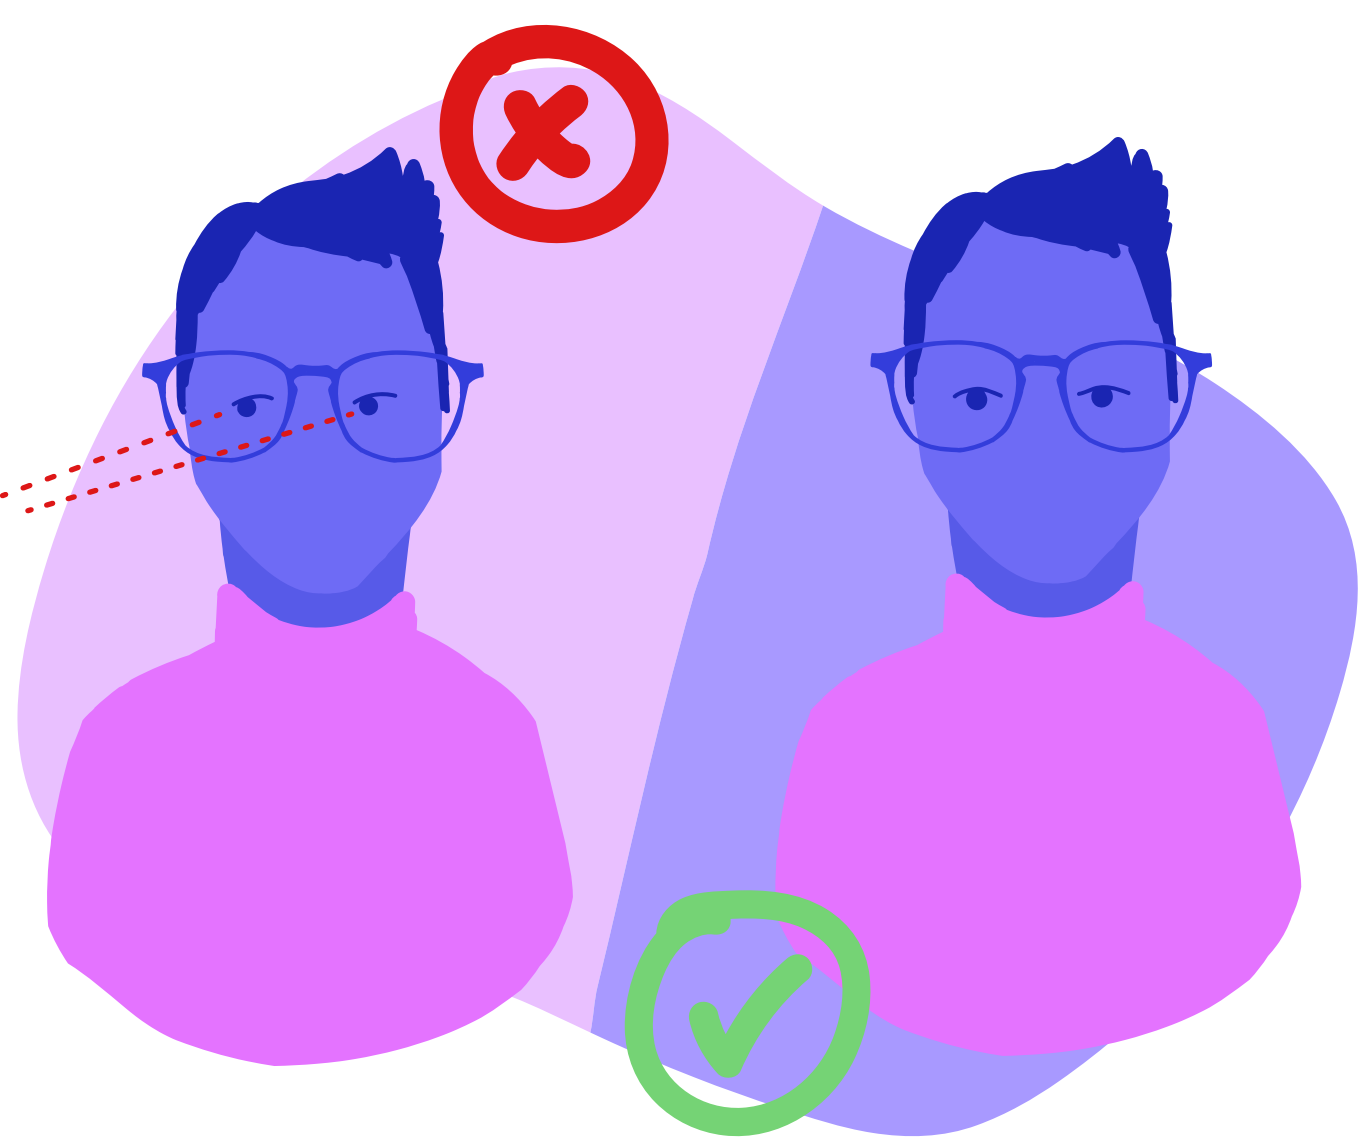

Avoid tight or busy patterns (phones hate them)

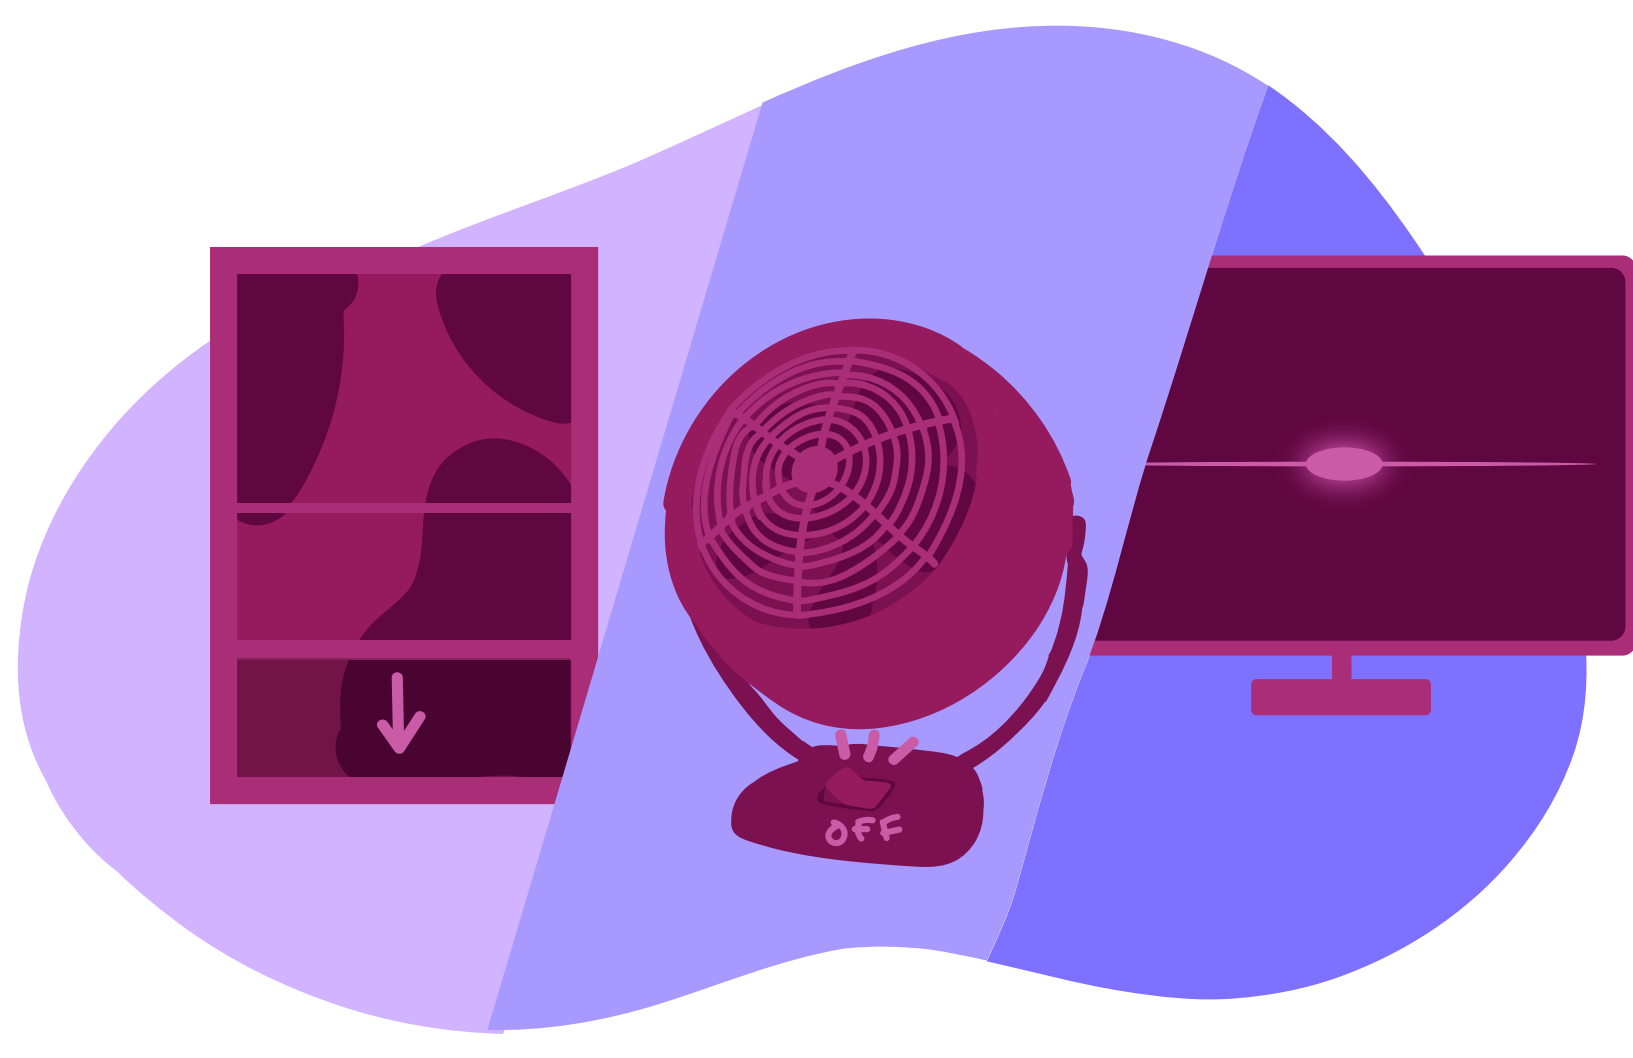

Set up the ideal background: not blank, not cluttered, and no windows or bright lights

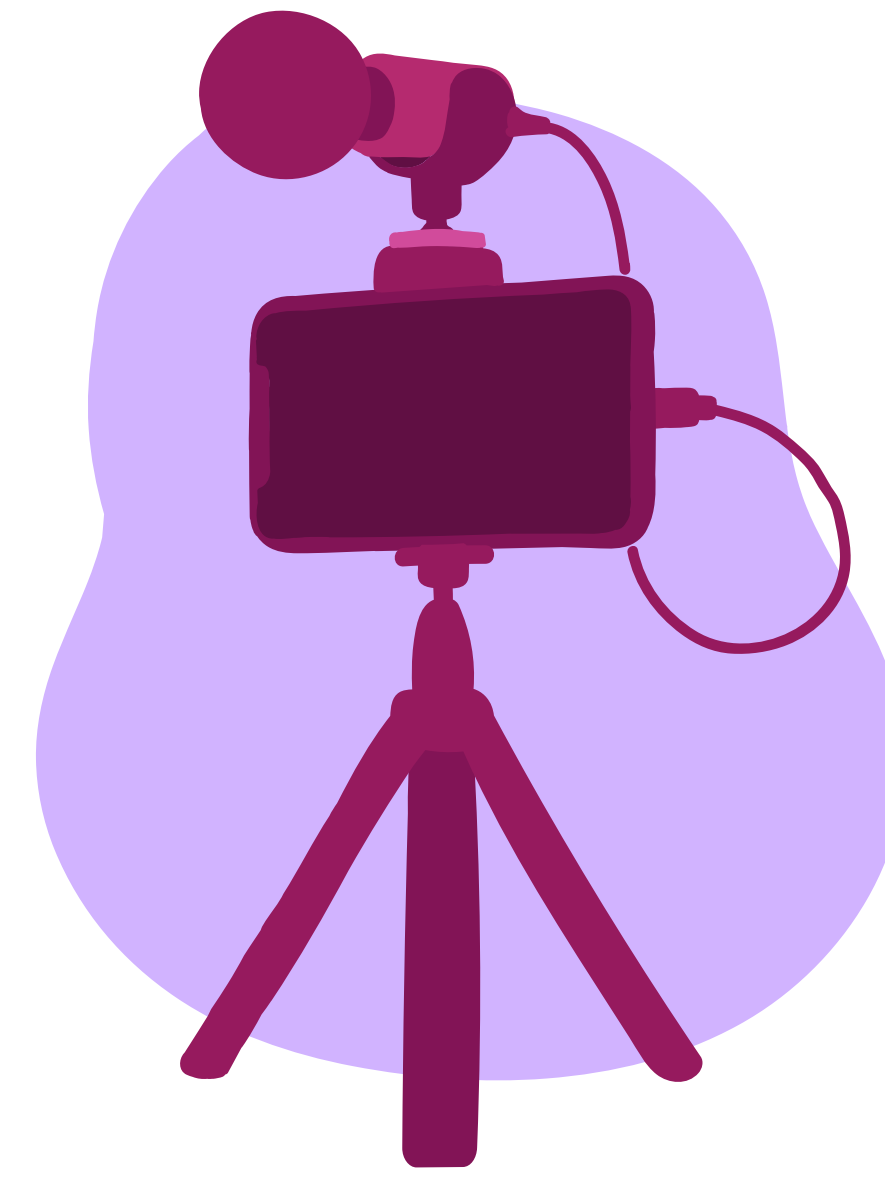

Use something to keep your phone steady

Look directly at the camera (we know it's hard)

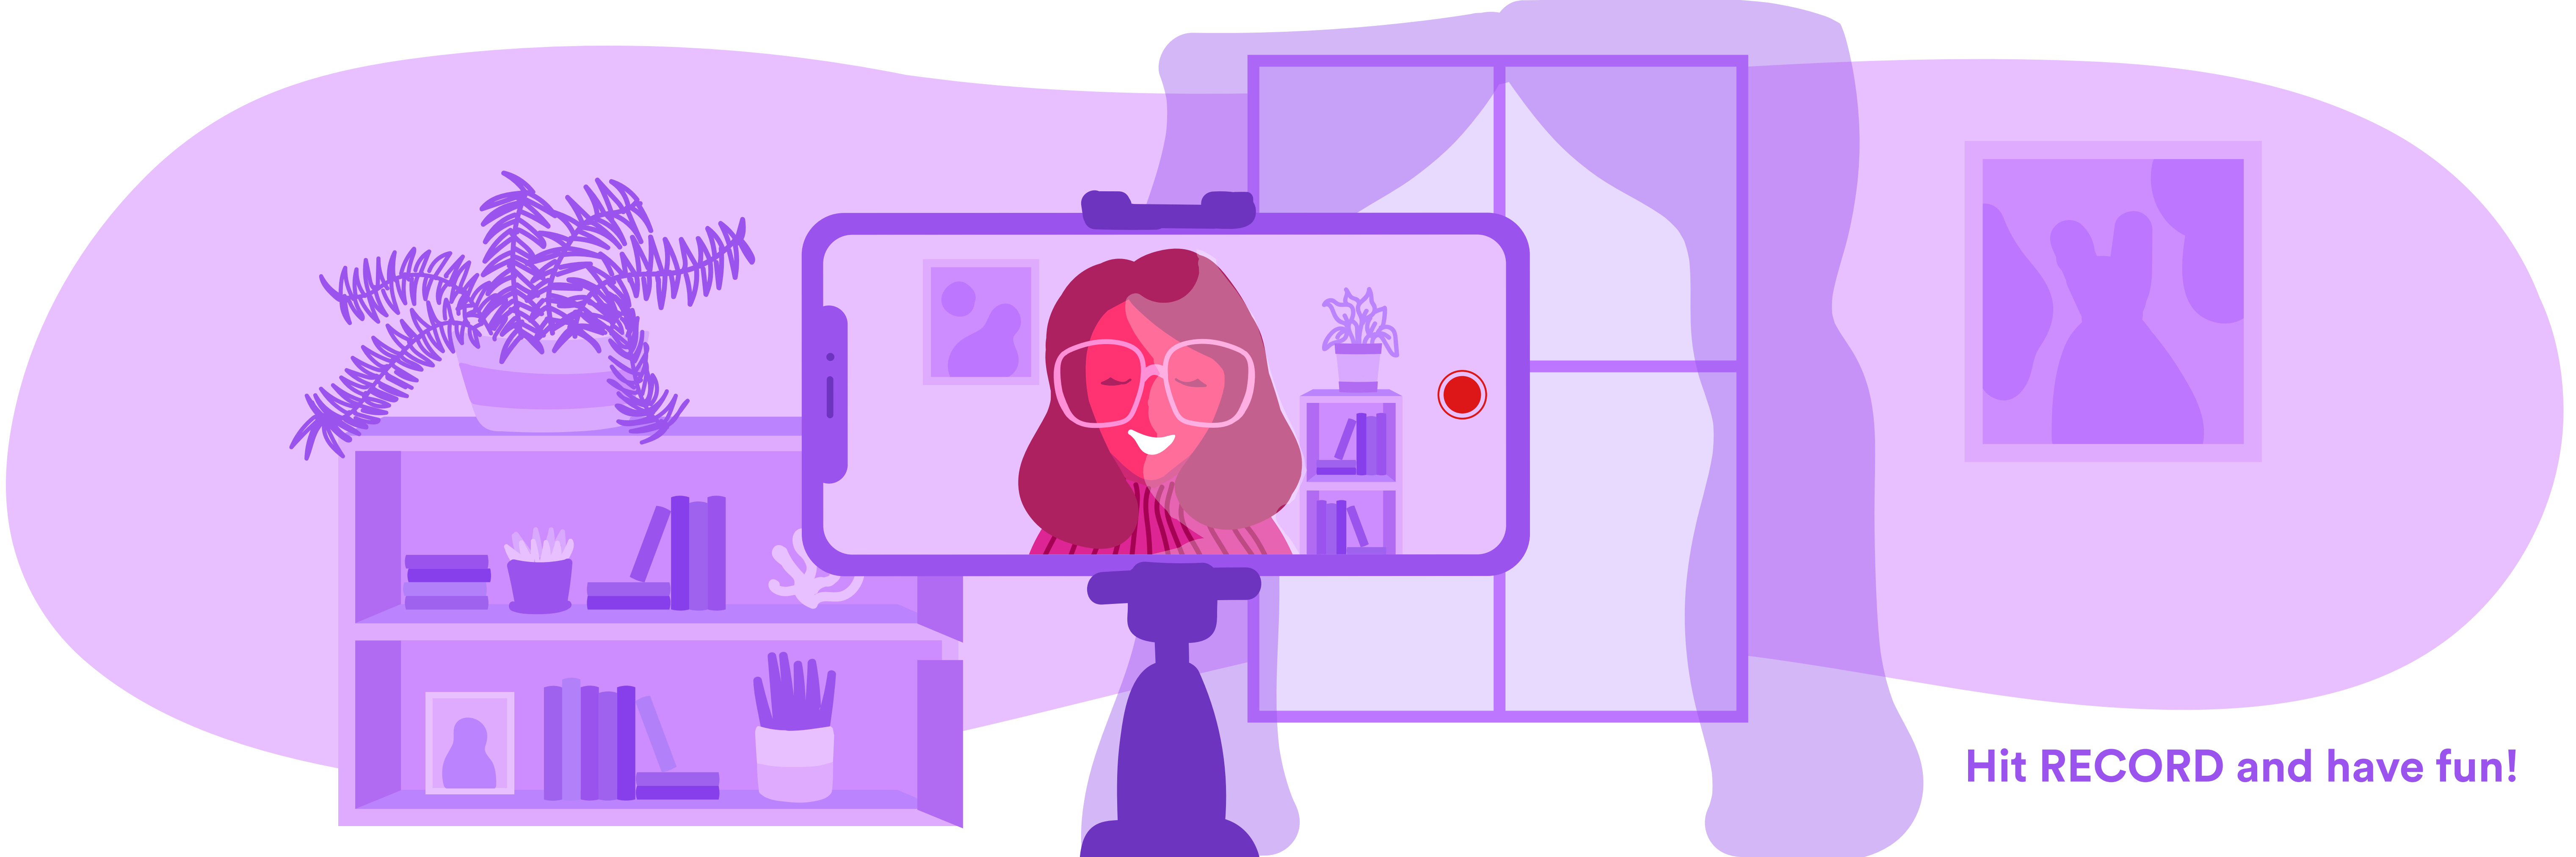

Turn off noisy items in the room

Use a microphone for better audio quality

Before taping for real, record a test to make sure you look and sound good

Hit RECORD and have fun!
